

SOFTWARE ENGINEERING LAB-2

NAME: SUMEET SHIGGAVI

SRN: PES1UG24AM452

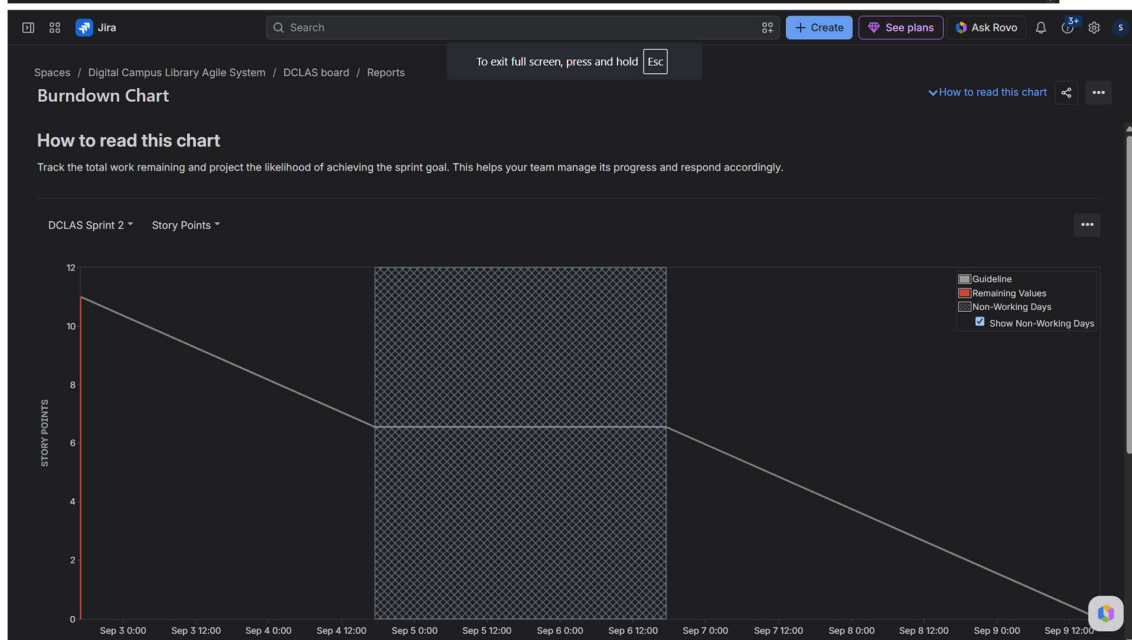

SCENERIO:08

REFLECTION:

Through this lab, I learned how to convert functional requirements into Agile Epics and User Stories in Jira. I learned how to prioritize stories, assign Fibonacci story points, organize stories into sprints, and track their progress using the To Do, In Progress, and Done stages. I also learned how the Burndown Chart can be used to monitor sprint progress. Overall, the activity helped me understand how Agile Scrum practices can be applied to manage and track software development work effectively.

REFLECTION QUESTIONS AND ANSWERS

1. Did your estimations reflect the actual effort?

The report does not include the estimated story points alongside the actual effort, so I cannot confirm whether the estimates matched the work completed. The lab helped me learn to assign Fibonacci story points to user stories.

2. Was your backlog well-prioritized?

I learned how to prioritize user stories in Jira. However, the report does not record the backlog order or the completed story outcomes, so I cannot determine how effective the prioritization was.

3. How did your simulated sprint align with your plan?

I learned to organize stories into sprints and track them through To Do, In Progress, and Done. The report does not include the sprint plan or completion results, so it does not provide enough information to assess how closely the simulated sprint followed the plan.

4. What insights did the burndown chart give about your team's capacity?

The burndown chart helped me understand how sprint progress can be monitored. The report does not include the chart or its data, so I cannot draw a specific conclusion about the team's capacity from the submitted information.
